

Notes on contributors

June Barrow-Green is a lecturer in the history of mathematics at the Open University (UK). Her main research interests concern mathematics of the 19th and early 20th centuries. She was an Associate Editor of the *Princeton Companion to Mathematics* (2008), and she has recently completed studies on British mathematics during the First World War and mathematics in the British Empire. She currently holds a visiting research professorship at Nancy-Université where she is working on George Birkhoff and dynamical systems.

Della Fenster is a professor of mathematics at the University of Richmond. Her research focuses primarily on the history of American Mathematics (especially algebra and number theory) in the late 19th and early 20th centuries.

Miquel Forcada is Associate Professor of Arabic and Islamic Studies, University of Barcelona. His research interests are in the history of Arabic science. Among his recent publications are “Astronomy, Astrology and the Sciences of the Ancients in Early al-Andalus (2nd/8th – 3rd/9th centuries)”, *Zeitschrift für Geschichte der Arabisch-Islamischen Wissenschaften* 16 (2004–2005), 1–74; “Ibn Bxjja and the Classification of the Sciences in al-Andalus”, *Arabic Sciences and Philosophy*, 16 (2006), 287–307.

Jeremy Gray studied mathematics at Oxford and Warwick University, where he took his doctorate in 1980. He has taught at the Open University since 1974, and is also an Honorary Professor at the University of Warwick, where he lectures on the history of mathematics. His most recent book is *Plato's Ghost — The Modernist Transformation of Mathematics* (Princeton, 2008).

Ulf Hashagen is a member of the Research Institute for History of Science and Technology at the Deutsches Museum in Munich, Germany. He also teaches history of science and technology at the University of Munich. His recent publications include *Walther von Dyck (1856–1934): Mathematik, Technik und Wissenschaftsorganisation an der TH München* (Steiner, 2003). He is currently working on a book on the history of scientific computing in Germany (1870–1970).

W. R. Laird is Associate Professor of History at Carleton University, Ottawa, Canada, where he teaches medieval history and the history of science. He is the author of *The Unfinished Mechanics of Giuseppe Moletti* (2000) and is currently completing a book on 16th-century mechanics entitled *The Renaissance of Mechanics*.

Andrew Perry received his Ph.D. in mathematics from Oklahoma State University in 1999. Currently, he is an Associate Professor of Mathematics at Springfield College in Massachusetts, where he has taught since 1999. Recently he was elected to a second two-year term as Electronic Resources Coordinator of HOM-SIGMAA, the History of Mathematics special interest group of the Mathematical Association of America. He is particularly interested in old textbooks, especially early 19th-century American arithmetics.

Tilman Sauer is Senior Research Associate in History in the Division of Humanities and Social Sciences at the California Institute of Technology in Pasadena, USA, and Senior Scientific Editor of *The Collected Papers of Albert Einstein*. His research focuses on various topics in the history of 20th century theoretical physics.

Joachim Schwermer is professor of mathematics at the University of Vienna. In addition, he serves as scientific director at the Erwin-Schroedinger International Institute for Mathematical Physics, Vienna. His research interests lie in number theory and algebra, in particular, in questions arising in arithmetic algebraic geometry and the theory of automorphic forms. He takes a keen interest in the mathematical sciences in the 19th and 20th centuries in their historical context.

Reinhard Siegmund-Schultze is professor of mathematics at the University of Agder in Kristiansand (Norway). His most recent book is *Mathematicians Fleeing from Nazi Germany* (Princeton University Press, 2009), and he is currently working on a scientific biography of Richard von Mises.

Benno van Dalen is an historian of Islamic mathematical astronomy currently appointed at the Lehrstuhl für Geschichte der Naturwissenschaften at Ludwig Maximilians University in Munich, Germany. His main research interests lie in the transmission of Islamic astronomical materials to surrounding areas, including Europe, India and China. At the moment he is preparing a new catalogue of Islamic astronomical handbooks with tables, as well as a monograph on Islamic astronomy in China. He was managing editor and editor of *Historia Mathematica* from 2004 to 2009.

Alexei Volkov obtained his PhD from the Institute for History of Science and Technology of the Academy of Sciences of the USSR (Moscow) in 1989. In 2006, he joined the Faculty at the National Tsing Hua University (Taiwan). His research interests have been concerned with the history of science (in particular, mathematics) in traditional China and Vietnam. His recent publications include “Geometrical Diagrams in Liu Hui’s Commentary on the *Jiuzhang suanshu*”, *Graphics and Text in the Production of Technical Knowledge in China*, ed. F. Bray, V. Dorofeeva-Lichtmann, G. Métailié, (Brill, 2007) pp. 425–459, and “Mathematics and Mathematics Education in Traditional Vietnam”, *Oxford Handbook of the History of Mathematics*, ed. E. Robson, J. Stedall, (Oxford University Press, 2009) pp. 153–176.
